

Each Entity must have a ADD/REMOVE/EDIT feature. For example employee information should be editable.

Inventory has 2 types. Components constitute what parts are used for making the final product (Fixtures)

The relationship between Fixture and component is critical as the person would need to order components to make the fixtures. Fixtures need to be listed in a manner that it shows how many units of EACH component were used to make it.

Customer should be able to click on email of vendor for a particular component and order the part via outlook etc.
