

C-7 Subcontractor Safety Requirements

Subcontractors are responsible for their own health and safety and the health and safety of their workers. **Subcontractors must comply with the Assurance Construction Health and Safety Program and the Assurance Construction Loss Control Program** (as detailed in the Health & Safety Manual).

Subcontractors must also develop a written health and safety program when required to do so by the authority having jurisdiction in the province.

In accordance with the contract agreement signed, each Subcontractor is required to clean up and dispose of all debris generated by the performance of its work. Failure to complete the clean up as notified will result in the work being done by Assurance Construction and a deductive change order will be issued for the cost. Assurance may issue a Subcontractor clean-up notice for non-compliance. While on the work site, Subcontractors must do the following:

- Comply with all applicable safety rules and regulations, whether municipal, provincial, federal, or specific.
- Co-operate with all safety representatives having jurisdiction at the site.
- Attend Assurance Construction's site safety orientation.
- Contact the Project Superintendent for special instructions regarding operating hazards and safe work instructions particular to the work site before starting work.
- Provide appropriate personal protective equipment (PPE) to subcontractor workers and enforce its use. PPE violations by subcontractors and their workers are not tolerated by Assurance Construction.
- Explain safety rules and regulations to their workers.
- Work safely in a manner that will not pose any hazard to any person.
- Ensure that subcontractor workers work safely, in a manner that will not pose a hazard to any person.
- Report any unsafe conditions to the site superintendent without delay.
- Report all accidents, injuries, and near misses.
- Investigate lost-time accidents in conjunction with Assurance personnel.
- Provide emergency transportation for injured Subcontractor workers.
- Provide a language translator, as required, for its workers.
- Comply with Workplace Hazardous Material Information System (WHMIS) regulations.
- Hold toolbox safety meetings for all subcontractor workers (subcontractors may use the Assurance Subcontractor toolbox meeting record form if necessary – available from the site superintendent) and provide JDS with documentation of toolbox meetings at a minimum of once a week.
- Immediately correct any unsafe conditions or practices reported or observed within their jurisdiction.
- Subcontractors that are going to be on site longer than one week are required to complete formal site inspections at required intervals and submit them to the Assurance site superintendent.

I have read and understand the Subcontractor Safety Requirements and will provide Assurance with all applicable health and safety forms.
